ELECTRONIC LOCKER

Locker operation is centralised and each locker station can be accessed remotely from a server computer.

Available in multiple languages

Users can operate the locker to their preferred language.

Infrared detector on each compartment

The system can detect whether a locker is empty or not using infrared technology.

Color-coded display for locker status

Users can choose a locker based on the status of each compartment.

Intact Information

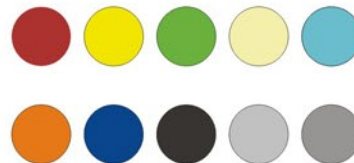

In any event of power failure, information on the locker is not lost and remain intact from the system.

Custom-made color

You can pick any colour from our range of colour selection
